

Year 5/6 topic home learning

In year 5/6, we have been exploring the Earth's different biomes. We have looked at the physical features and geographical locations of each biome. We have also discussed the impact of climate change.

We would like the children to select a biome to present in a way of their choosing OR to create their own mini eco-system. Below are some ideas for ways to present work:

- Painting or detailed drawing with labelled physical features
- Shoe box model with labelled physical features
- Mini eco-system in a jar - <https://kidzeum.org/learning/step-by-step/biosphere-in-a-jar>
- Clay or playdoh model with labelled features
- Create a Minecraft biome

The website below has some helpful information to support the children with labelling.
