

# What is Phonics?

Phonics is a way of teaching you how to read and write. It helps you hear and use different sounds. Phonics helps you to blend the sounds of letters together and decode unknown words by sounding them out.

Someone who studies Phonics is learning a way to help them to read and spell.

I will be learning these skills in

- How to hear sounds in words.
- How to de-code unknown words.
- How to read tricky words.
- How to spell words.
