

What is Design and Technology?

Design and Technology is about making things that we can use.

In Design and Technology, we can use tools to help us make things that work well and make our lives easier. We can make food to eat, buildings that are strong, soft toys, clothes and moving vehicles.

We can choose the best way to make things and test out what we've made.

Someone who studies Design and Technology is called a Designer or an Engineer.

We will be learning about early humans, who designed the wheel.

I will be learning these skills in Design and Technology:

- Designing and planning
- Taking turns in a group
- Sharing ideas
- Using different tools correctly
- Testing and evaluating
